593 was with his brother and not his brother's sons. When the father persisted with his intention to embarrass his nephews, his sons, as a last alternative, threatened to leave him. In the face of this threat, the father capitulated.

The rights and duties of the father-son relationship, although they do not change in sentiment, will change in content during the lifetime of the father. The main change [421] in content will be a reflection of a change in property re- 593 lations. The Bedouin believe that this is the way it ought 599 to be; they say that

> A son must respect and obey his father. The son must do anything that he can to help and please his father. When the son grows up and begins to earn money, he must contribute generously to his father. A son pleases his father by giving him money and helping him to be comfortable.

593 In boyhood and manhood, the father has disposal over his son's 596 labor. As long as a son lives in his father's naja' this is [464] so. One son, who worked for an American oil company in the desert, regularly turned over his pay check to his father. It is the father who decides where the son will live, and, whether or not he will have his own domicile away from the main naja'. When the son marries and brings his wife to the [591] naja', he will usually set up his tent next to his father's tent. The tent is given to the boy by his father. During 593 the son's growing-up period, he will be given, as gifts on 431 various occasions, a sheep or a number of sheep which will be kept with the father's flock.

439 market with more than one-third of its lamb meat. The other two-
[315] thirds of the lamb market was supplied from the Sudan, the Delta, and
[315] from Libya. Oil industry in Libya attracted a large number of the young
[178] tribal members in Libya, who had originally undertaken the main task of
[464] sheep pastoralism. As a result, the population of sheep and goats in Libya dropped sharply. Not only did the Libyan market become unable to supply the Egyptian market, but it was also unable to support itself and was forced to pay high prices for the Western Desert sheep and goats.
[457] The price became even more attractive after the devaluation of the Egyptian pound which gave higher value to the Libyan currency, and hence, the price of sheep. In the last decade, the number of smuggled sheep reached a point where it created a great shortage of lamb meat in Egypt. All government attempts to stop smuggling activities in either direction have failed.

657 All these factors attracted the attention of the government to the area and its people. The need to control the tribal population became evident. But since it is difficult, if not impossible, to control a population which is constantly on the move, the first step the government took to control the tribal population was to settle them in permanent villages. A number of projects are underway. The aims of these
[654] projects are to increase the cultivated land and to improve the pastures
[137] by introducing new and highly nutritive pasture plants in areas where agriculture is not feasible. Attempts have also been made to promote local crafts and industries. The intentional efforts of the government
[178] to settle the tribal population is supplemented by the gradual drift of
[464] many tribesmen, especially the younger generation, to seek part-time or

full-time employment with the government projects in the area and settle in fairly permanent houses near the place of work.

With the movement toward settling down, the relative legal and political autonomy which Awlad Ali once enjoyed is breaking down. This was reflected first in the loss of military exemption. In 1947, the draft law was applied to all tribal populations in Egypt, including Awlad Ali. The application is not seriously enforced, however, due to the fact that births are still not recorded in the area. In 1954, the "omda" or mayorship system practiced in the rural areas of Egypt was extended to the Western Desert with certain modifications to fit the tribal organization of populations in the area. This put a strain on the native system of leadership, a point which will be covered in later chapters. Finally, and along with the extension of the omda system, the jurisdiction of the legal system of the state was extended over the area. This resulted in a duality in the judicial process. The tribal law, with its traditional tribal mediators, is still functioning side by side with the modern court system of the state law. In many cases, especially in criminal cases, the individual is tried under both systems, and sometimes receives two different judgments for the same offense. Various efforts are being made to minimize the effects of this duality. In civil cases, the problem does not seem serious, since it is the parties themselves, or one of them, who voluntarily bring the case to the attention of the legal authorities. Therefore, they can choose between the traditional legal system and the modern courts of law. So far, civil cases are brought to the modern court system only when the native procedures fail to achieve a settlement. As such, the

613 Written agreements such as the above are becoming more common in
675 the area. The need to have the responsibility of the vengeance group
[178] or the Amar recorded and the names of its members listed stems from the
[361] increase in the geographical mobility of individuals and separate house-
[464] holds seeking jobs with the government organizations in the area or with
the various industries in the towns and cities outside the Western Desert.
233 The uncertainty of pastoral nomadism and the delicate balance which exists
178 between pastures, animal population, and human population is pushing an
182 ever-increasing number of people to abandon the way of life which they
had lived for generations. Animals are extremely important to sustain
233 the pastoral life of Awlad Ali. Once the balance between the pasture and
182 the animal population is upset by a draught, a segment of the human popu-
731 lation has to make new adjustments. This adjustment is first made by
166 moving with one's flocks to areas in the Delta or in the Cyrenaica region
of Libya. This is a short-term adjustment, however, and cannot be con-
tinued for long periods of time. Pastures in the Delta have to be pur-
chased, and in most cases the owner of the herd has to sell part of his
[619] herd to feed the rest. The Cyrenaica pasture is very limited and re-
stricted by the strong tribal control of the Cyrenaica Bedouins, who in
general are not friendly with many of the tribal segments living in the
233 Egyptian Western Desert. If the draught continues beyond a certain time,
731 the individual owner of a herd may find himself forced to sell the herd
464 and seek other modes of subsistence in the form of part-time or full-time
434 employment as a semi-skilled or unskilled worker with the government or
182 industrial organizations. Such jobs are usually viewed as a temporary
source of income to help the individual and his immediate family live

233 through a hard year and to help him replace the herd he has lost. In
731 many cases a dry year is followed by another and many of these employed
464 find themselves depending more and more on their income from the jobs.
434
182 The security of the employment is often compared favorably with the uncertainty of nomadic existence, and many decide to abandon the pastoral life on a more or less permanent basis. But even when one makes such a decision, he usually retains a strong affiliation with his original way
613 of life. He retains an active interest in the affairs of his Amar, es-
182 pecially those from which he can benefit in one way or another. One im-
682 portant gain he might get is through sharing in the receipt of bloodmoney for the killing of any member of the Amar, and having the Amar paid in his behalf. But while asserting their membership in the Amar at the time of such distribution, very few, if any, would show themselves when the membership of the Amar is called upon for the collection of bloodmoney which the Amar has to pay for a murder committed by one of its members.
613 It is known in the area that members of one bait of the Aggary Amar (Bait
682 Ahmad) have never paid their share of the bloodmoney of the last twenty
578 years, but always claim their share in the distribution of bloodmoney. Many members of that Bait claim that the Bait has long been separated from the Aggary Amar, although this claim is denied by the rest of the Amar as well as by those members of Bait Ahmad who claim their share in the receipt of bloodmoney.

613 Disputes such as these, which are not limited to the Aggarty, led
675 many Amars to attempt to make comprehensive lists of all members of the
578 Amar and to require a written agreement in case of separation of a given Bait from the Amar.

PHASE I

613 578 682 [464] In September of 1956, Mansur from bait Eweidha of the Aggary Eila, who works as a driver in one of the government projects in the area, went to Alexandria with a friend, a member of the Gemei'at tribe. In one of the bars there, Mansur got drunk and entered into an argument with his friend. The argument turned into a fight during which he hit his friend with a broken bottle. Two days later, the friend died. A settlement was made between Mansur and the victim's family and bloodmoney was established at L. 300.

613 682 683 Two weeks after the above incident, the same person, Mansur, was driving the government car on his regualr duty when he ran over two members of the Sanagrah tribe who were sitting on the side of the road, killing one and breaking the leg of the other. Another settlement was made with the families of the victims. The bloodmoney for the dead man was established at L. 300 and another L. 50 was set as the compensation for the broken leg of the other man.

The total sum of compensations in the two incidents was divided among the sixteen baits constituting the Aggary Amar. The share of each bait was decided in proportion to the number of adult males (sayems) in each. The share of bait Asabei' alone was established at about L. 100.

613 682 683 672 558 As the Aqila of Bait Asabei', Shei'eb was responsible for collecting the money from members of his bait. But for the following six months he was unable to collect from any member of his bait, including Sheikh Hakim, Shei'eb's cousin and the wealthiest person in bait Asabei' and the Aggary Amar as a whole. Most of them gave the execuse that it was a bad year and they had lost most of their herds. When the money was not collected,

613 682 [554] [178] usually has no difficulty collecting the individual shares. His own financial ability is rarely called upon. When a member is unable to pay for any reason, his share is divided among the able members. However, in recent years this seems to be changing, especially among the baits closely located to the settled communities or the urban centers. Among

613 178 166 464 369 these baits individual mobility has increased significantly with a large number of younger members either leaving the area for the urban centers or accepting salaried jobs with the government organizations. Among certain baits in the area of Burg el-Arab, for example, the percentage of adult males engaged in such jobs sometimes reaches sixty percent. More than thirty-five out of fifty-six males constituting bait Asabei' have a full-time or part-time job.

613 178 166 464 682 369 The individualistic attitudes accompanying the dependency on salaries and living in towns and cities have their effects on the kinship ties among members of these baits. With the prevalence of the individualistic attitudes among members of a certain bait, they become more reluctant to pay their financial obligations and the Aqila finds it more and more difficult to rely, for the fulfillment of the bait's financial obligations, on the willingness of members to pay. His success within

613 554 556 682 the domain of the amar becomes more determined by his ability to pay from his own money for those members of his bait who refuse or are unable to pay. Wealth becomes an important asset for the Aqila's performance of his duties within the amar. When this happens, there seems to be a certain shift in the source of political support for the Aqila.

613 554 In a well-integrated bait the popularity (or unopopularity) of the Aqila among the other Awaqil of the amar had very little influence on his

613 position as the leader of the bait. The principle of patrilineal suc-
554 cession is so respected in such baits that it overshadows any other con-
613 sideration. This continues to be the case as long as the kinship ties
554 within the bait remain strong. When the kinship ties in a given bait
428 weaken, the principle of patrilineal succession also weakens. This is
178 more likely to occur in baits where a relatively large number of the
[166] members leave the area permanently or for a more or less prolonged period
[464] of time, seeking jobs on a part or a full-time basis. Many of these
613 members maintain only a minimal contact with their respective baits.
178 They become more reluctant to fulfill their kinship obligations, es-
166 pecially when they entail any financial liability. The older members
464 complain about how younger persons are less loyal to their elders and
561 how selfish they have become. "All they care about is their jobs and
369 the pleasure they get from the city; they are becoming city people."
Younger members, on the other hand, maintain that their reluctance to
fulfill their kinship obligations stems from their feeling that they
do not get anything in return. "Life is expensive and money is hard to
obtain. I cannot make enough money to support myself and my wife and
children and at the same time pay my cousin's financial debts," said a
member of eilat Asabei', who works as a driver with the Desert Organi-
zation in Alexandria.

613 When this happens, there seems to be a tendency toward shifting the
554 emphasis from the bait to the eila or the amar as the source of the po-
[556] litical support of the Aqila. This is turn makes wealth an important
basis of the Aqila's power. No more can the bait impose an ineffective
Aqila on the amar unless it is ready to back him by their own share of
money. If this is lacking as was the case with Shei'eb, there is nothing

634 554 659 who reach the age of military service. He is also supposed to report the presence of any fugitive or crininal in his district and report crimes accurring in that district and which involve members of the tribal segment he represents.

634 554 657 562 701 178 The first two duties of the omda to the government do not involve any conflict of interest. Unlike the rural areas where sons are considered a very important economic asset to their parents, and therefore, there is a general resentment of military service which takes the sons away and deprives the parents of their important work around the fields, Awlad Ali look at military service as

1 On the basis of one percent of the yearly yield.

an opportunity to have their sons go to the city, obtain guaranteed payment, and escape the hardship of nomadic existence. Economic activities [233] in the area do not require the cooperation of a large number of individuals, and most of the grazing of animals is done either by a paid shepherd or by one of the grown-up sons. Although there still exists an [183] ideology which values having many sons, yet with the cessation of hostilities between the tribal segments, their presence in the area has lost its [464] value. Many of the younger generation are seeking jobs with the government projects in the area or in the city. Neither one is easy to find. Joining the army is increasingly considered as an easy alternative.

634 554 657 674 The omda's function which seems to involve some conflicting loyalties is that of reporting crimes involving members of his tribal segment. But even this does not pose a serious problem as it might seem. Almost all minor crimes committed against property or persons as well as all civil disputes are left to be handled by the tribal proceedings. The duties of the omda are limited to reporting the cases of murder and serious assault

613 628 the tent and fearing that he might have been a member of the feuding Bait intending to harm him or members of his family, Galil took his gun and went outside to see who was there. He called on the person to identify himself. When he got no answer, he warned him that unless he identify himself, he (Galil) would fire his gun in the air as a warning. After a short period of no 613 628 response, Galil fired his gun in the air. A moment later, Galil 682 heard a cry coming from the direction of a small hill at the side of the tent. When Galil went there, he found Salem, a member of a neighboring camp, lying on the ground with a bullet wound in his stomach. He told Galil that his wife was sick and that he had come to borrow Galil's donkey to take her to the doctor in the nearby medical center. He had taken the short cut to Galil's tent when he was hit by the bullet which Galil had fired in the air. Galil took his wounded neighbor to the medical center, but Salem died before they reached it.

682 672 627 673 The Mi'ad was held, and Galil and his family had to pay L.E. 400 to the victim's kin group. The amount was that specified for intentional killing, since the wound that caused the death was inflicted by a lethal weapon.

CASE #5: The Case of the Startled Shepherd

233 [464] [319] [312] This case involves Idris, a poor member of the Sheresat tribal segment. He earned his living by working as a hired shepherd for 'Awwad from Bait Ibrahim in the area of Gharbaniat. During the dry season, each shepherd takes his flocks to the water wells near the coast and leaves them there for three or four hours to get their fill of drinking water. That afternoon, Idris, waiting for the

243 They could not sow a better crop. There are wild varieties of barley in Cyrenaica and the country is in every way suited to its culture. It is very hardy, stands up to drought, and easily holds its own against the grasses, which are ploughed in with [251] the seed on the plateau. When the barley and wheat have been reaped, the grain is stored in *kuf*. On the plateau these are ancient tomb-caves; elsewhere they are holes dug in the ground.

[731] In a bad year, and even more in a succession of bad years, the Bedouin have experienced famine, but in most years the barley, and to a lesser extent the wheat, give an abundant [433] yield. Bedouin have told me that they expect from sowing in the beds of wadis up to a hundredfold of barley and in the *barqa* up to fiftyfold. On the plateau the yield is smaller and in the Marmarica and Sirtica much smaller. In Turkish times [439] there was a large export of grain from Cyrenaica. Mondaini says that it was to the mean annual value of 40,000 Lire Sterling for the years 1885 to 1900.[1] Much of this surplus was bought by English brewers.

433 The Bedouin way of life is well adapted to their environment.
182 Given the inconstancy of the rainfall and the distribution of water supplies they would be foolish indeed were they not, at any rate in part, shepherds. They are not, of course, in all
433 respects self-supporting. They make their winter tents and a
439 good part of their equipment, carpets, sacks, and so forth, from
182 the wool of their beasts, but some things the Bedouin regard as
[239] necessities have to be imported, notably tea, sugar, some rice, and cloth, especially the *jird*, the woollen cloak of the country. They trade these with surplus stock on the hoof, skins, wool, clarified butter, surplus barley, and honey and wax, so that they are in an economic sense self-supporting.

433 Cyrenaica is a rich country for Bedouin, a poor country for
187 Europeans. Bedouin generally have no overhead expenses in
[556] production. I say generally, because rich men sometimes
[233] employ shepherds, though this is usually the practice of urban
[464] merchants engaged in the sheep trade. Bedouin use their own
[511] labour and that of their families and animals. What is perhaps more important is that they are prepared to live on what

tions and gardens. On the other hand, it was recognized that if they were to be able to lead a nomadic life at all, and they had to do so if they were to rear their animals, they must have access to water-supplies and grazing-grounds, and that this would sometimes mean their crossing the plateau through the area of Italian colonization. To solve this problem corridors running north and south across the plateau were, as explained in an earlier section, marked out for the transit of Bedouin flocks and herds.

It was envisaged that the Bedouin would continue to lead a predominantly pastoral life on the more rugged parts of the first terrace of the plateau, on its southern slopes, and in the steppe country of the *sirwal*, the *barqa*, the Marmarica, and the Sirtica. It was thought that they had in these areas all the land they needed for grazing and catch-crop cultivation, though it was evident that in years of drought they could not have managed to survive without summer grazing on the plateau. Nevertheless, efforts were made to raise the economic level of the Bedouin by improving their methods of cultivation and stock-raising so that, as both producers and labourers, they might be more valuable an adjunct to Italian husbandry, and might become more dependent on the State and more closely linked with metropolitan activities. It was intended that they should constitute a cheap reserve of labour for general unskilled work and for seasonal labour on the farms of the colonists. By using them in this way it was hoped that it would be possible to avoid the growth of a metropolitan proletariat.[1] These efforts included, largely for political reasons, the creation of Arab colonization centres. Agricultural villages and farms were to be built by the *Ente* similar to, but smaller than, those built for the Italian immigrants. The first two such villages, Fiorita and Alba, were built in 1939. Each Arab farming family was provided with a house, a well, a camel, a cow, and farm implements. Like the Italian, the Arab colonist was to be first salaried labourer, then partner with the State, then mortgagor, and finally owner. As only thirty-two holdings were prepared at Fiorita and Alba the contribution to native agriculture cannot be regarded as more than a token one. Moreover, the Italians experienced difficulty in finding Arab colonists for even these
